	Introduction	xxi
PART I	Get Started	
CHAPTER 1	Get Acquainted with Access 2003	3
	Start Access and Open a Database	4
	Take a Tour of the Access Window	5
	Open a Database	6
	Open the Sample Database	9
	Tour the Database Window	11
	Look at Menu Options and Toolbar Buttons	12
	Use Shortcut Menus	13
	Open a Table	14
	Take a Tour of the Datasheet View	15
	Check Out the Subdatasheet	17
	Get Help When You Need It	18
	Ask a Question	19
	Use the Microsoft Access Help Task Pane	21
	Ask the Office Assistant	23
	Ask What's This?	23
	Get Help with What You're Doing	23
CHAPTER 2	Create a Database	25
	Design an Efficient Database	26
	Determine the Goals of the Database	28
	Distribute the Data Among the Tables	28
	Identify the Data Fields	29
	Specify Key Fields	30
	Define Table Relationships	31
	Complete the Database	32
	Create a Database with the Database Wizard	33
	Preview the Database Templates	33
	Work with the Wizard	34

	Run the New Application	38
	Start with a Blank Database	39
CHAPTER 3	Create and Modify Tables	41
	Create a Table with the Table Wizard	42
	Choose a Table and Add Fields	42
	Set the Primary Key	44
	Relate to Existing Tables	45
	Create a Table from Scratch in Design View	47
	Tour the Table Design View	47
	Add Fields	48
	Choose a Primary Key	57
	Create Other Indexes	58
	Create a Table in Datasheet View	60
	Save the Table Design	61
	Modify the Table Design	62
	Switch Table Views	62
	Add or Delete Fields	62
	Change the Field Order	63
	Change a Field Name or Type	63
	Change a Field Size	64
	Modify or Delete the Primary Key	65
	Ensure Data Validity	65
	Define Field Validation Rules	66
	Define a Record Validation Rule	67
	Require an Entry and Prevent Duplicates	69
	Handle Blank Fields	69
	Assign a Default Value	70
	Copy an Existing Table Structure	70
CHAPTER 4	Relate Tables	73
	Define a Relationship	74
	Use Ready-Made Relationships	74
	Use the Relationships Window	75
	View and Edit Relationships	85
	Modify or Delete a Relationship	85
	Change a Table Design from the Relationships Window	86
	Print the Relationships	86
CHAPTER 5	Enter and Edit Data	89
	Enter New Data	90
	Copy and Move Data	90
	Insert Pictures	93
	Insert Hyperlinks	96

Customize Data Entry	99
Add Custom Input Masks	99
Create Lookup Fields	103
Change the Datasheet Appearance	106
Move and Resize Columns and Rows	106
Freeze and Hide Columns	108
Change the Font	109
Change Grid Lines and Cell Appearance	110
Set Datasheet Default Options	111
Change Table Definition in Datasheet View	112
Insert/Delete a Subdatasheet	112
Insert/Delete a Column	113
Change Field Names	113
Edit Record Data	113
Locate Records	114
Find and Replace Data	118
Delete Data	118

PART II Retrieve and Present Information

CHAPTER 6	Sort, Filter, and Print Records	123
	Sort Records	124
	Sort on a Single Field	124
	Sort by Two or More Fields	125
	Save the Sort Order	125
	Filter Records	125
	Filter By Selection	126
	Use an Exclusion Filter	128
	Filter By Form	128
	Filter For	133
	Filter with Advanced Filter/Sort	133
	Save a Filter	135
	Remove and Delete Filters	136
	Preview and Print Sorted or Filtered Table Data	136
CHAPTER 7	Extract Information with Queries	139
	Create a Select Query	141
	Use the Simple Query Wizard	142
	Tour the Query Design Window	143
	Without the Wizard	145
	Relate Multiple Tables in a Query	146
	Add/Remove Fields	148
	Run and Save the Query	149
	Hide and Show Fields	150

	Specify the Record Order	151
	Show Highest or Lowest Values	152
	Add Selection Criteria	153
	Use Wildcards and Operators	153
	Use a Single Criterion	154
	Use Multiple Criteria	154
	Get Help from the Expression Builder	156
	Set Query Properties	158
	Modify a Query	159
	Insert a Field and Change the Field Order	159
	Change Field Properties	160
	Perform Calculations in a Query	161
	Add a Calculated Field	161
	Summarize with the Wizard	163
	Summarize in the Query Design	164
	Create Special Queries with the Query Wizard	166
	Create a Find Duplicates Query	166
	Create a Find Unmatched Query	167
	Create a Crosstab Query	169
CHAPTER 8	Create Advanced Queries	173
	Create Special Purpose Queries	174
	Parameter Queries	174
	AutoLookup Queries	177
	Update Query	178
	Append Query	181
	Delete Query	182
	Make-Table Query	183
	Look at Structured Query Language (SQL)	185
	Review SQL Statements	185
	Create a Subquery	187
	Define a Criterion	187
	Define a New Field	188
CHAPTER 9	Understand Form and Report Design Basics	189
	Use AutoForm and AutoReport Features	190
	Common Form and Report Design Elements	191
	Understand Controls	192
	Work in the Design Window	193
	Start a New Design	193
	Tour the Design Window	194
	Add Controls	197
	Modify Controls	202
	Select Controls and Other Objects	202
	Move and Resize Controls	204

	Align and Space Controls	206
	Use Property Sheets	206
	Use the Formatting Toolbar	209
	Format Conditionally	209
	Change a Control Type	212
	Delete Controls	212
	Modify Form or Report Properties	213
	Change the Record Source	213
	Apply Filters and Sort Orders	214
	Use AutoFormat	214
	Add a Background Picture	215
CHAPTER 10	Create Custom Forms and Subforms	217
	Create a New Form Design	218
	Use the Form Wizard	220
	Create a Form Without the Wizard	221
	Modify the Form Design	222
	Add Form Header and Footer Sections	223
	Place and Customize Data-Related Controls	223
	Add Yes/No Controls	231
	Add User-Interactive Controls	234
	Use the Form for Data Entry	237
	Size the Form	238
	Navigate in the Form	238
	Change the Tab Order	238
	Locate Records	239
	Sort and Filter Data in a Form	239
	View Multiple Records	240
	Create a Multiple-Page Form	241
	Add a Page Break	242
	Add a Tab Control	242
	Customize a Tab Control	244
	Add Special Controls	245
	Add Calculated Controls	245
	Add an AutoDial Control	245
	Create a Hierarchical Form	246
	Use the Form Wizard	246
	Use the Subform Wizard	248
	Use the Hierarchical Form	251
	Modify a Subform	251
	Add Custom User Guidance	252
	Add Data Validation	252
	Validate with Properties	253
	Validate with Events	253

CHAPTER 11	Create and Customize Reports and Subreports	255
	Start a New Report	256
	Use the Report Wizard	257
	Preview and Print the Report	262
	Work in the Print Preview Window	262
	Use the Layout Preview	264
	Print the Report	264
	Modify the Report Design	266
	Examine the Report Sections	266
	Set Report and Section Properties	267
	Change the Report Style	268
	Add Page Numbers and Date/Time Controls	268
	Save the Report Design	270
	Sort and Group Records in a Report	270
	Change the Sort Order	271
	Add Group Sections	271
	Customize Group Headers and Footers	273
	Add Summaries and Running Totals	274
	Apply the Finishing Touches	275
	Modify and Add Groups	275
	Create a Summary Report with the Report Wizard	278
	Print an Alphabetic Index	280
	Add a Subreport	281
	Create a Subreport with the Report Wizard	282
	Create a Subreport Control	283
	Insert an Existing Subreport	286
	Link the Report and Subreport	287
	Modify a Subreport Control	288
	Design a Multiple-Column Report	289
	Print Mailing Labels	290
	Use the Label Wizard	291
CHAPTER 12	Create Charts and Graphs	295
	Choose a Chart Type	296
	Create a New Chart with the Chart Wizard	296
	Select the Data for the Chart	296
	Use the Access Chart Wizard	299
	Save the Chart	302
	Link the Chart to Record Data	302
	Add an Existing Chart to a Form or Report	303
	Modify the Chart	304
	Modify with Access	305
	Edit with Microsoft Graph	308

PART III	Improve the Access 2003 Workplace	
CHAPTER 13	Customize the Workplace	319
	Personalize the Workplace	320
	Rearrange Icons	320
	Create a Shortcut	321
	Set Workplace Options	322
	Create Custom Groups	333
	Change the Way Access Starts	334
	Modify the Office Assistant	337
	Show and Hide	337
	Set Office Assistant Options	337
	Choose a Different Assistant	338
CHAPTER 14	Speed Up Your Database	341
	Optimize a Database	342
	Use the Analyzer Wizards	342
	Optimize Tables and Queries	348
	Optimize Filter By Form	350
	Optimize Forms and Reports	350
	Optimize Controls	351
	Back Up and Restore a Database	352
	Compact and Repair a Database	353
CHAPTER 15	Automate with Macros	357
	Create a Simple Macro	358
	Choose Macro Actions	359
	Set Action Arguments	360
	Test and Debug a Macro	361
	Start the Macro	361
	Step Through a Macro	362
	Modify a Macro	363
	Assign a Macro to an Event Property	363
	Decide Which Event to Use	364
	Add Conditions to a Macro	365
	Create a Macro to Display a Warning	366
	Create Other Commonly Used Macros	368
	Set Control Values and Properties	368
	Change the Flow of Operations	370
	Filter Records	372
	Create an AutoExec Macro	373
	Create a Macro Group	373
	Assign AutoKeys	375

CHAPTER 16	Customize Menus and Toolbars	377
	Use Access Command Bars	378
	Show and Hide Built-in Toolbars	379
	Show and Hide Toolbar Buttons	381
	Move and Resize Command Bars	381
	Change Menu and Toolbar Options	381
	Customize Command Bars	383
	Create a Global Toolbar	383
	Create Custom Toolbars and Menu Bars	383
	Attach a Custom Command Bar to an Object	391
	Specify Global Command Bars	391
	Delete a Custom Command Bar	392
	Modify Command Bars	393
	Move Controls	394
	Add and Delete Controls	395
	Edit Buttons and Menu Commands	395
	Restore Built-in Command Bars	397
CHAPTER 17	Create Custom Switchboards and Dialog Boxes	399
	Create Switchboards	400
	Use the Switchboard Manager to Create Switchboards	401
	Modify the Switchboard	408
	Create a Custom Dialog Box	412
	Design the Form	412
	Create and Attach the Macros	414
	Set Form Properties and Style	416
	Create a Dialog Box for User Input	419
	Set the Input Form Properties	419
	Create the Macros	420
	Modify the Query	421
PART IV	Exchange Data with Others	
CHAPTER 18	Exchange Database Objects and Text	425
	Copy Objects among Access Databases	426
	Copy and Paste	426
	Drag and Drop	427
	Import or Link Access Data	428
	Import Objects	428
	Set Import Options	430
	Link Access Tables	431
	Import from or Link to Other Data Sources	432
	Use Data from dBASE or Paradox	433

	Work with Linked or Imported Tables	434
	Rename a Linked Table in Access	434
	Change Linked Table Properties	435
	Update Links with the Linked Table Manager	435
	Unlink Tables	436
	Import and Link Text Files	436
	Use Delimited Text Files	436
	Use Fixed-Width Text Files	440
	Change Import Specifications	441
	Export to an Existing Access Database	442
	Export to Another Database Format	444
	Export to Text Files	444
CHAPTER 19	Exchange Data with Outside Sources	447
	Copy or Move Records	448
	Copy or Move Data from a Word Processor	448
	Copy or Move Data from a Spreadsheet	450
	Copy or Move Records from Access to Another Application ...	450
	Save Access Output as an External File	451
	Work with Word	452
	Save in Rich Text Format	453
	Save an Access Table or Query as a Mail Merge Data Source ...	454
	Publish with Word	454
	Use Merge It with Word	455
	Work with Excel	457
	Import from and Link to Excel Spreadsheets	457
	Export a Table or Query to Excel	462
	Use Analyze It with Microsoft Excel	462
CHAPTER 20	Share with Multiple Users	465
	Share a Database on a Network	466
	Share an Entire Database	466
	Split the Database	467
	Prevent Exclusive Access	471
	Replicate a Database	471
	Manage the Database in a Multiuser Environment	472
	Control Data Editing	473
	Update Records with Refresh and Requery	476
	Edit Shared Database Objects	476
CHAPTER 21	Secure a Database	477
	Secure a Database with a Password	478
	Secure a Multiple-User Database	479
	Understand the User-Level Security Model	479

	What Is Needed to Secure a Database?	481
	Secure a Database with the User-Level Security Wizard	481
	Create a Workgroup Without the Wizard	486
	Assign or Change Permissions and Ownerships	493
	Remove User-Level Security	497
	Other Security Measures	498
	Encode and Decode a Database	498
	Hide Database Objects	498
APPENDIX	Convert to Access 2003	501
	Decide on a Conversion Strategy	502
	Convert a Database	502
	Convert a Workgroup Information File	504
	Convert a Secured Database	504
	Convert a Replicated Database	504
	Enable a Database	505
	Share a Database Across Several Access Versions	506
	Convert from Access 2002-2003 to Access 97	507
	Convert from Access 2002-2003 to Access 2000	507
	Index	509
