ACKNOWLEDGMENTS	xiii
INTRODUCTION	xvii

PART I

Logical Availability

1 Oracle and Availability: Illustrated Downtime Scenarios	3
Horatio's Woodscrews	4
User-Defined Availability	7
Test and Development Availability	7
Cyclical Database Resource Requirements	8
What Reports Were Those, Exactly?	9
Out of Space in the Woodscrew Tablespace	10
Downtime for Hardware Fixes	11
Restarting Long-Running Transactions	12
Slow Crash Recovery	12
Dealing with Block Corruption (ORA 1578)	13
Waiting for the File to Restore from Tape	14
RAC and the Single Point of Failure	15
Rewinding the Database	15
The Dropped Table	16
The Truncated Table	17
Connecting Online, Identical Databases	18
Complete and Total Disaster	18
Where to Go from Here	19
2 RDBMS Features for Availability	21
Enterprise Manager	22
Oracle Database Control	23
Database Control Console: Navigation	23
Oracle Enterprise Manager Grid Control	27

Database Configuration on the Fly	28
spfile or init.ora?	29
Nondynamic Parameters	30
Data Architecture and Availability	34
Partitioned Tables and Indexes	35
Index-Organized Tables	42
Materialized Views	43
Online Reorganization	46
Resource Manager and Scheduler	49
Managing Limited Resources	49
Heir to the Job Throne: The Scheduler	50
LogMiner: Transaction Extraction	52
Transportable Tablespaces	54
3 Tuning Your Database for Availability	61
Intelligent Infrastructure	62
MMON Background Process	62
AWR: Automatic Workload Repository	63
What Is AWR?	63
Viewing an AWR Report	64
Interpreting the Workload Repository Report Output	64
Creating Baselines for Comparing the Workload	66
ADDM (Automatic Database Diagnostic Monitor)	70
Viewing the ADDM Reports	70
What Drives ADDM?	73
Advisor Central	76
SQL Tuning Advisor	76
SQL Access Advisor	77
Memory Advisor and ASMM	78
Additional Advisors	81
Automatic Storage Management (ASM)	83
ASM Concepts	83
Implementing ASM	87
Managing ASM Environments with EM	91

PART II

Real Application Clusters

4 RAC Setup and Configuration	99
Cluster-Ready Services (CRS)	100
CRS Architecture	101
Virtual IP Addresses, or VIPs	102
CRS Installation	102
Operating System Configuration for CRS	103
Storage Requirements for CRS/RAC	103

Networking Requirements for CRS and RAC	105
Kernel Parameters	105
OCR and Voting Disk Requirements	106
Preparing for the CRS Install	107
Network Configuration	110
Shared Storage Configuration	115
The Actual CRS Install Itself	121
Coexistence of CRS and Local Only Installs	121
Installing CRS	122
What Just Happened?	126
Installing the RDBMS	127
ORACLE_HOME on Local or Shared?	127
Installing the Product	129
Database Creation	130
5 Database Administration in a RAC Environment	137
RAC Essentials	138
Instance Naming	138
spfile in the RAC World	138
RAC-Specific Parameters	140
Additional Background Processes in a RAC Instance	143
Cache Coherency in a RAC Environment	146
Managing REDO and UNDO in a RAC Environment	148
Redo Logs and Instance Recovery	148
Redo Logs and Media Recovery	149
UNDO in RAC	157
Adding and Removing Cluster Nodes	157
Adding a Cluster Node	158
Removing a Cluster Node	164
Additional RAC Considerations	170
Managing ASM Environments	170
Patching in a RAC Environment	171
Enterprise Manager Grid Control and RAC	171
6 Utility Computing: Applications as Services	177
Services Concepts	178
Services as a Workload	178
Services as Applications	179
Services from the Database Perspective	179
Creating Services	181
Viewing Services from Within the Database	185
Using SRVCTL to Manage Services	189
Node Applications	190
Managing Databases and Instances via SRVCTL	191

Managing Services via SRVCTL	195
Additional Notes on Services	197
The Oracle Cluster Registry	198
Information in the OCR	198

PART III

Disaster Planning

7 Oracle Data Guard: Surviving the Disaster	205
Making the Right Choice	206
Physical Standby Databases	206
Logical Standby Databases	207
Creating a Physical Standby	208
Creating a Logical Standby	214
Is Logical Standby Right for Your Application?	214
Log Transport Services	220
Defining Log Transport Services Destinations	221
Log Transport Services and Security	225
Standby Redo Logs	225
Protection Modes	226
Maximum Protection	226
Maximum Availability	227
Maximum Performance	228
How Data Guard Handles Network Disconnects	229
Gap Detection and Resolution	230
Methods of Gap Resolution	230
Managing a Physical Standby	232
Starting a Physical Standby	232
Starting Managed Recovery	232
Using the Standby in Read-Only Mode	235
Accommodating Physical Changes Made on the Primary	236
Managing a Logical Standby Database	238
Stopping and Starting SQL Apply	239
Monitoring SQL Apply Progress	239
Protecting the Logical Standby from User Modifications	240
Recovering from Errors	241
Changing the Default Behavior of the SQL Apply Engine	243
Additional DBMS_LOGSTDBY Procedures	244
Performing a Role Transition Using Switchover	247
Performing a Role Transition Using Failover	252
Failover First Steps	252
Using Flashback After a Failover	254
Data Guard Broker and Clients	256
The CLI Interface	257
Using the Data Guard GUI	259

8 Backup and Recovery for High-Availability Environments	275
The Importance of Media Backups	276
RMAN: A Primer	277
RMAN and the Controlfile	278
RMAN and the Data Block	280
RMAN Command-Line Usage	281
RMAN from Enterprise Manager	282
Preparing an RMAN Backup Strategy	286
The Flashback Recovery Area	286
Permanent Configuration Parameters	289
Caring for Your Controlfile	291
Backing Up the Available Database	293
The High-Availability Backup Strategy	293
Backing Up the Flashback Recovery Area	299
Backup Housekeeping	300
Performing Recovery	303
Database Recovery: Restore and Recover	303
Block Media Recovery	306
Media Management Considerations	306
The SBT Interface	307
Backing Up Directly to Tape	308
RMAN and Data Guard	309
Using RMAN to Build the Standby Database	309
RMAN and RAC	316
RMAN Configuration for the Cluster	316
Flashback Recovery Area for RAC	321
Oracle and Split-Mirror Technologies	322
The Split-Mirror Configuration	322
RMAN Backups from the Split Mirror	323
Use DG Instead	326
9 Oracle Flashback: Surviving User-Induced Trauma	327
Prepared for the Inevitable: Flashback Technology	328
Flashback Query	329
Flashback and the Undo Segment: A Love Story	329
Performing Flashback Query	330
Flashback Versions Query with Enterprise Manager	331
Flashback Transaction Query	336
Flashback Table	339
Performing the Flashback Table from SQL	340
Flashback Table with Enterprise Manager	340
Flashback Drop	342
The Recycle Bin	343

Flashback Database	347
Flashback Logs	348
Flashback Retention Target	348
Flashback Database: Tuning and Tweaking	350
Flashback Database: Opportunity for Different Uses	352

PART IV

Distributed Database Solutions

10 Oracle Streams for High Availability	357
Streams at a Glance	358
Streams Capture Process	360
Streams Propagation	360
Streams Apply Process	361
Rules, Rules, Rules	361
Streams for High Availability	362
Streams Replication and Replica DBs	362
Setting Up Streams Replication	363
Planning for Streams Replication	363
Configuring Streams Replication	365
Conflict Resolution	372
Downstream Capture of LCRs	385
Administration of Stream Processes	388
Completely Removing a Streams Configuration from the Database	389
Streams Summary	389
11 Oracle Net Configuration for Failover	391
Definitions	392
Connect-Time Failover	392
Transparent Application Failover	393
Client-Side Load Balancing	394
Server-Side Load Balancing	395
Net Configuration	396
Using GUI Tools to Generate Configuration Files	397
Easy Connect	397
Environments Suitable for TAF	398
Listener Configuration	400
Why a Virtual IP?	400
Bibliography	403
Index	415
